

Style Guideline

- Backend Style Guide
 - Tab indentation (4 spaces per tab)
 - camelCase variableNames
 - Variable names begin with a lower case
 - Multiword variable names follow the camelCase format
 - ALL_CAPS GLOBALS
 - Ex. GLOBALS
 - Multiword names are separated by an underscore
 - Ex. GLOBAL_OFFENSIVE
 - Macros are also followed by this as well
 - Comments
 - A short sentence or two on what the specific function/variable/class/etc is doing and why they take certain parameters
 - Unix Linefeed
 - New lines of text are denoted by the LineFeed character
- Frontend Style Guide
 - Tab indentation (4 spaces per tab)
 - camelCase - variableNames
 - Keep any names concise and clear for anyone to understand that it stores or what it does
 - Capital Letter CamelCase class names
 - All files must have the following comment block

/**

@ Creator

@ Date:

Purpose:

*/

- All components must have its own folder with its own .js file and .scss file
 - Styling should be scalable and doesn't break spacing when pushed
 - Keep spacing consistent and clean, use white space if needed to increase readability
- Nest components to increase modularity and replicability, take advantage of the power of React's library
 - Maintain nested inheritance in the physical file system
- Dynamically populate fields whenever possible, avoid magic number or hardcoded values.
