

Sprint 3 Report
Neo-Market
4x2
Mar. 11, 2018

Actions to stop doing:

- Stop being afraid to ask for help.
- Stop holding onto one problem that's blocking you from moving forward entirely.

Actions to start doing:

- Try 2 dev parties a week, or one long dev party

Actions to keep doing:

- Being aware of each other schedules
- Maintain Dev parties
- Maintain weekly team specific meetings

Work completed/not completed

- **Completed**
 - Web app components passing and JS logic is fleshed out
 - Navigation
 - Routing dynamically, instead of hard coded paths
 - All items have unique ids, gets all ids, gets all path for each item, like a map.
 - Rerenders the new page, dynamically created the item when we clicked on the item.
 - Props passing, states
 - Styling, spacing
 - Integration with the backend, network call
 - Contract functions
 - Register, stored a user's address on a smart contract
 - isRegister, verify is user exists in storage
 - createPost, creates a list that stores import information for a post, deserializes and puts it in storage
 - select, retrieves given list info from storage
 - fillMaster, puts important info into a registered users storage
 - Needs to be updated with new functions once we have transactions working
 - deletePost, deletes a post from storage
 - Create-functions.js which is responsibly interacting/manipulating the smart contract from the front end.
 - AddPost() = get all posts that will be used to populate the listings page
 - DeletePost() = delete the post in the more info item
- **Not Completed**
 - User base functionality
 - More currencies compatibility
 - Categorizing the posts into digital assets, digital services, physical services, etc.

- **Work Completion rate**
 - 90%
